

Are Glass Bottles a problem for you?...

WE ARE NOW DISTRIBUTING!

The new Oppressor GL Glass Bottle Crusher

GLASS BOTTLES → SAND = MONEY

This specialty glass reduction machine is designed for

- Bars • Cafes • Restaurants • Sport Clubs • Councils
- Hotels • Resorts • Holiday Parks • Marine • Recycling Centres

The simplicity of the Oppressor GL is an astounding feature. The operator simply ensures the bucket is not full and is sealed correctly, switches the machine on and feeds individual bottles through the rubber safety flap on the shoot. The precision cut oppressors each individually balanced take care of the rest, reducing glass bottles from their full state to a fine sand or grit in a matter of seconds.

The specially developed filter system and sealed bucket ensure there is no risk of nuisance glass dust escaping. Although suited for a storage area, back room or waste area, the relatively quiet nature of the machine means it could be installed directly behind the bar at certain establishments.

RECYCLING

Despite many feel good, costly recycling initiatives in many regions only a small percentage of all glass collected is getting recycled; huge quantities still find its way to the landfill one way or another. Either due to contamination, sorting constraints or simply efficiency and logistical issues the result of limited processing facilities.

GLASS SAND

On premise crushing of glass bottles to sand is not only a cost and space saving initiative but carries forth significant benefits environmentally. Glass sand reduces the nuisance of noise pollution associated with the disposal and transport of glass beverage containers. Although glass sand is not able to be easily sorted for the reproduction of glass bottles the total reusable recovery rate is huge and can be used for various industrial applications on a whole reducing the carbon footprint of glass.

GLASS SAND USES

- Brick & Tile
- Waste Water Filtration
- Drinking Water Filtration
- Industrial Water Filtration
- Swimming Pool Filtration
- Grit Blasting
- Back Fill
- Concrete Filler
- Aggregate for suspending pipes
- Drain laying
- Sports Turfs
- Artificial Surfaces – Gallops, Grass Surfaces (Nelson)
- Golf Bunkers Root Zone
- Top Dressing
- Fibreglass Insulation
- Container Glass
- Bound & Unbound Aggregate
- Vineyards for under the vines to keep weeds down

BINS YOU MAY BE REQUIRING (VIEW MORE ONLINE)

WHEELIEBINS

80,120,140 & 240litre
 Recycling Codes
GREEN = rubbish
YELLOW = glass
RED = cans
BLUE = plastic
GREY = paper

70ltr FOOT OPERATED

- ▶ Ideal For Kitchen Staff Cafe Food Tuck Shop
- ▶ Convenient Small Size

STACK N' NEST 50 litre
