

VISION SYSTEMS
ELECTRICAL & SECURITY SOLUTIONS

PROFILE

Vision Systems are setting new standards in the electrical and security industry by providing clients with exceptional levels of service, support and high-quality professional solutions.

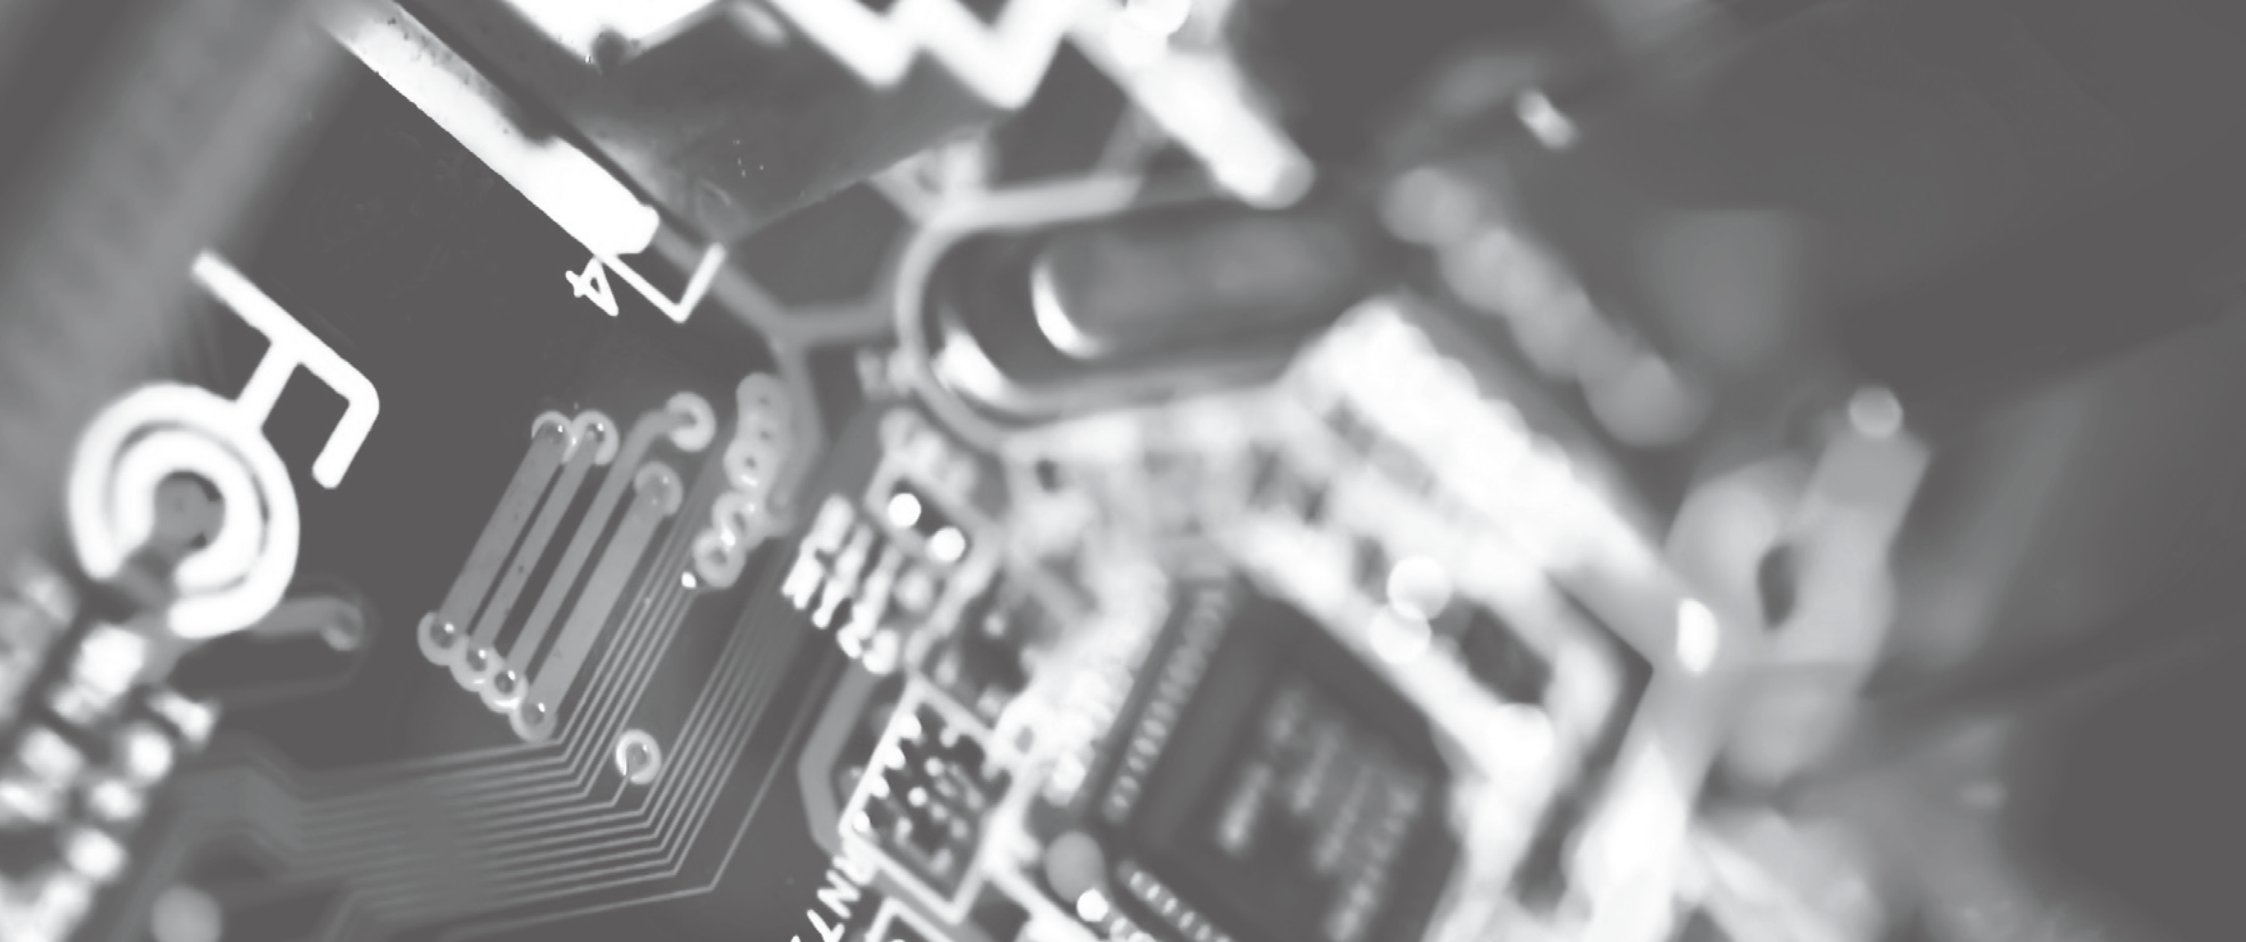

Vision Systems specialises in electronic security installation and maintenance and electrical services including installation, maintenance and certification.

Vision Systems can demonstrate extensive experience among its management team within the industry in both sales and technical support and are ideally placed to improve on the quality of service delivery that many clients currently experience.

Vision Systems' mission emphasises its commitment to delivering its clients with a real value proposition and truly sets a new benchmark in the industry.

The factors that differentiate Vision Systems from other companies can be listed as follows:

- A 'can do' attitude
- Expertise across all systems
- Experience among its team members
- Great ability to resolve problem systems
- Providing good value for money
- A true intention to partner with its customers

ELECTRICAL

SOLUTIONS

Vision Systems offer an extensive range of Electrical solutions:

Commercial Fit-outs

Our experienced staff have worked with many of the leading commercial builders on projects ranging from large rest homes to shop fit-outs, always delivering a quality job on time.

New Home Builds

Through careful project management and quality workmanship we deliver a quality product that can include all the latest innovations and automation to make your home your dream.

Electrical Design

We can help design the best and most efficient concepts for your lighting layout and control, display lighting and automation to cater for all your power needs.

Data and Phones

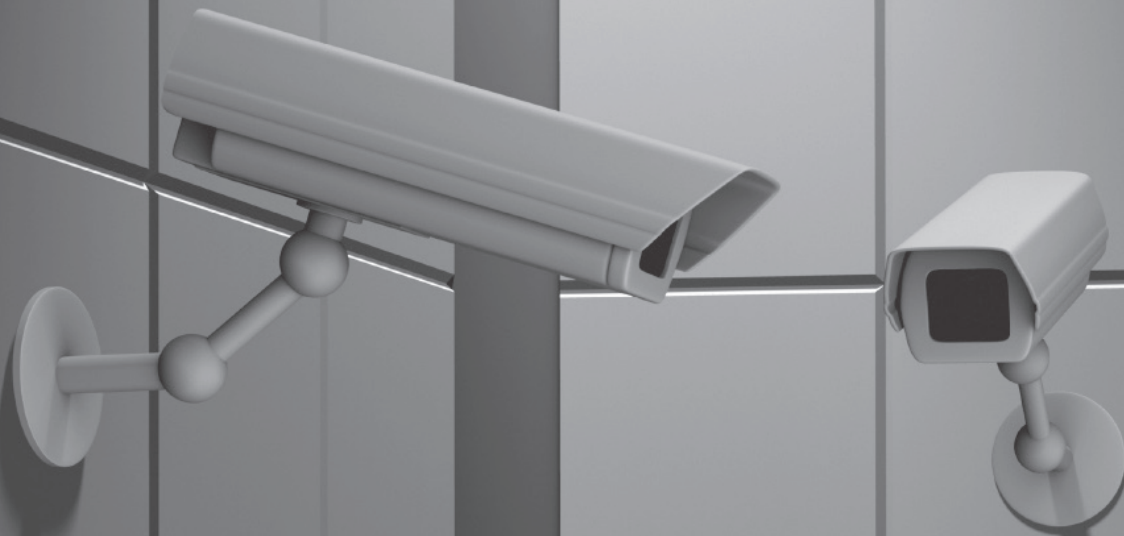

Vision Systems can provide specific solutions to suit most applications from home networks and school projects, through to large office installations.

Heat Pump Supply and Installation

We are able to provide convenient and energy efficient heating and cooling solutions. We can ensure that contemporary styling of systems will compliment any interior.

Residential Servicing

We have experienced registered electricians available to help you with the planning and installation of all your electrical needs, home additions, repairs or renovations.

SECURITY

SOLUTIONS

Vision Systems can help with all of your Security needs:

CCTV - Closed Circuit Television

Provides an evidential record of activity on a site. Images are recorded to either a digital video recorder or server and can be accessed on site or remotely via various methods including from an iPhone.

Gate Automation

Includes electronically controlling sliding gates, swing gates and barrier arms. Gate automation can be integrated into an access control system to enable an operation to control movement of staff and visitors.

Intruder Alarms & Detection

Detectors that will trigger an alarm in the event of a burglary. Sirens will provide an audible warning of an activation which can also be transmitted to a remote monitoring centre or cellphone.

Video Analytics

Video Analytics is the emerging technology where computer vision is used to filter and manage real time CCTV video for security and intelligent traffic monitoring.

Access Control

Allows businesses to control the movement of staff and visitors through doors with the use of card or biometric readers.

Intercom

Provide a means of communicating within a site or network. Intercoms can be used to verify who has presented themselves at a gate/door and then access can be granted.

Voice Over Internet Protocol (VoIP)

From a PABX, a VoIP system gives you telephone extensions through a computer Local Area Network over ethernet cables.

DESIGN PROCESS

1. Understand the Clients Concerns

Meet with Vision Systems to discuss security concerns and possible solutions.

2. Develop a Scope of Works

Vision Systems develops a system design detailing the fundamental operating parameters.

3. Development & Installation Design

The scope of works and recommended options are refined by Vision Systems as required.

4. Pre-installation

Scope of works discussed with the Vision Systems technical support team.

5. Installation of System

System is installed to the agreed scope of works.

6. Commissioning

The system is commissioned to an agreed standard including programming and training.
